

Financial Statement Analysis

Objectives

- *To provide participants with an understanding of the structure, interpretation and analysis of the key financial statements, the general accounting policies, principles and their applications (How to read financial statements?).*
- *Analyzing, interpreting and comparing company (including group) financial information, considering performance and prospects and evaluating company securities in the light of such analysis.*
- *Demonstrating an understanding of accounting concepts, including an awareness of current accounting issues and problems and their implications for investors.*
- *How a business obtains and uses its funds to achieve maximum operating efficiency and profitability? “Balancing between liquidity and profitability”.*
- *Learn concrete techniques that enable management to make truly informed decisions. “Financial Statement Analysis for Decision Making”*
- *Help financial statement users to read and interpret financial information.*
- *To help participants master the complex language and activity of investing and get started on the road to financial freedom and success. We start with the most basic concepts of investing, return and financial planning and then, on a gradient, get you more involved in advanced concepts.*
- *To understand the basics of investments, valuation and selection of various investment instruments*
